

COMMANDER II OPERATIONAL GUIDE

A **Tip-Up Armrests**
To adjust the height use the roller adjuster found on the bottom of the armrest. They can be tilted all the way up when they are not needed.

B **Seat Height Adjust.**
Simply pull upwards on the handle closest to the backrest of the chair. Then apply weight to make it go down and sit up to make it higher.

C **Tilt Rocker Adjust.**
To adjust the tilt of your chair lift the middle lever, then lean back on the backrest to desired position. Push down on the lever to lock the tilt angle.

D **Weight Adjust./Rocker Tension**
Turn the round dial located at the front on your right side. Turn it clockwise to increase tension and counter-clockwise to release tension.

E **Height/Tilt Adjustable Headrest**
Firmly grip the headrest, then pull or push down for your desired height.

F **Mechanical Lumbar**
To increase lumbar support simply pump either the left or right bulbs to desired comfort. To release the air, push the little black button.

G **Seat Back Angle Adjust.**
To adjust the backrest lift upwards on the black handle (located on the left side of the seat cushion) while pushing or pulling on the backrest of the seat.

H **Front Tilt Adjust.**
Simply turn the little handle found under the right side of the seat cushion, clockwise to floor to make the cushion go down or turn it counter-clockwise to make the cushion go up.

I **Seat Cushion Tilt Adjust.**
Lift up on the left hand handle located on the front edge of the seat cushion. Lift up or push down with your legs to achieve desired tilt.

J **Seat Cushion Length Adjust.**
Lift up on the right hand handle located on the front edge of the seat cushion. Slide forward or backward to achieve desired length.
